

Furniture Construction, Care and Maintenance

All-Weather Wicker

Our all-weather wicker furnishings are crafted from premium quality HDPE (high-density polyethylene) resin, which is hand woven over reinforced rustproof aluminum frames. Lab tested for fade-, sag- and mildew resistance, our all- weather wicker is virtually maintenance free. To clean, use only a mild soap and water solution and rinse thoroughly. Do not pressure-wash or use bleach to clean. Do not store furniture upside down as water may accumulate in frames and cause damage in freezing weather. To extend the life of your furniture, store indoors during months of non-use.

Cast & Extruded Aluminum

The finest raw aluminum in the world is extruded on site, framed, and baked with a durable powder-coated finish. For cast furniture, the process begins with a hand-carved original, around which a sand cast is formed. The original is then replaced with molten aluminum. The solid cast aluminum is cleaned, polished and powder-coated, and an antique finish is applied by hand. To clean, use only a mild soap and water solution, then rinse and dry thoroughly. To extend the life of your furniture, store indoors during months of non-use.

Cushions

Our *Leisurelux*™ cushions offer state-of-the-art comfort, resilience and wearability. A solid foam core is wrapped in polyester batting and encased in a waterproof polypropylene barrier, making it unsurpassed for outdoor use. Fabrics are available in a number of performance grades. To clean cushions, brush off any loose dirt and spot clean only, using mild soap and water. Rinse thoroughly and allow to air dry. Do not use chemicals on any cushion fabric unless otherwise specified by fabric manufacturer. To maximize cushion life, we recommend rotating and flipping cushions regularly, and storing indoors when not in use.

Marble & Granite Tabletops

Our *Lightweights*™ mosaic tabletops are crafted from natural polished marble or granite, then hand laid into patterns over a lightweight honeycomb base. This state-of-the-art technique offers the elegance of stone without the excessive weight. Tabletops are factory sealed to resist moisture and the elements. We recommend placemats and coasters to protect against food spills. To clean, wipe with a damp cloth and dry well. Never pressure-wash or use any household cleaners, abrasives or bleach, as this may damage stone and sealer. To repair or replace existing sealer, we recommend Aldon Chemical products available at www.aldonchem.com/erwin-marble.htm

Wonderwood™

Crafted from 100% virgin polystyrene, Wonderwood™ outdoor furniture offers the handsome styling of wood without any of the maintenance. Eco-friendly and fully recyclable, Wonderwood replicates wood's look and feel but will not splinter, rot, peel or blister. It requires no sanding, staining or resealing. Impervious to sun, rain, wind, and temperature extremes, WonderWood may be left outdoors through every season and will last for years to come. If necessary, wash with a mild soap and water solution, rinse, and air dry.

Hand-painted Sink Vanities

Vanities are crafted from Phase 2 CARB-compliant MDF and natural wood, with some styles accented by molded polyresin carvings and carved feet. Cabinets will never splinter or crack.

Sink vanities feature either granite or marble countertops and porcelain bowls. To clean cabinets, simply wipe down with a damp cloth and dry. Porcelain bowls should be cleaned with a mild detergent solution only. Do not use any type of harsh scouring cleanser as it may scratch finish. Marble and granite tops can be cleaned with a mild detergent solution only and thoroughly dried with a soft polishing cloth.

Hand-painted Occasional Furniture

Our occasional pieces are constructed of Phase 2 CARB-compliant MDF and natural wood, with some styles accented by molded polyresin carvings and carved feet. Cabinets will never splinter or crack. Simply dust, or clean with a damp cloth and dry.

Indoor Natural Rattan

Natural rattan is constructed from a type of climbing palm with long, solid slender stems and a uniform diameter. Rattan is extremely hard and durable, considered one of the strongest woods available for weaving furniture. The vine goes under a process of steaming and stripping the outer layer in order to prepare it for weaving. Therefore, rattan furniture should be used ***indoors only***, as weather extremes and rain can shorten the life of the processed fiber. To clean, simply dust or if necessary, wipe down with a damp cloth and let air dry.
